

Article 80 Review

The article is well-researched and structured. I enjoyed the fact the writer gave a bit of historical context and explanation of how and why the bubonic plague is important and how it may have caused or resulted in genetic mutations. The article communicated the writer's understanding of the topic. Most of the technical terms were explained and the in-text citations are helpful if the readers want to get a more-in depth view on the topic. The transitions were good and there was an easy flow throughout the article. The reason why they chose this article would also encourage readers to want to know more about this topic. Overall an excellent article!
